

62  
[1958]  
Due to our limited number of Crath Carpathian English (or Persian) Walnut nursery trees, we are not issuing a new catalogue this year.

The trees we now have, are of the same original stock that we sold for the Rev. Paul C. Crath of Canada from 1937 to 1943 when his supply of seed nuts was cut off by the Iron Curtain. Many of these seedlings have now come into bearing and have been under our close observation in central and western New York for several years. We have taken our grafts and seed nuts from the very best of these considering good bearing, hardiness and the size and quality of the nuts. It is our observation that these English walnuts from selected stock come more nearly true from seed than is the case with fruit trees.

While a considerable proportion of these trees are self-pollinating, better crops are assured if more than one tree is planted.

We have never had much success in transplanting large walnut trees. In our experience the younger trees stand transplanting better and are likely to overtake and pass the larger ones set at the same time. One year we transplanted six hundred with a loss of only eight.

~~Crath~~  
We have a limited supply of filberts.

These are from an original hybrid, selected for resistance to filbert blight as well as hardiness, size and flavor of kernel. This hybrid is a result of many years of crossing and a final selection from more than a thousand trees.

Shipments made either by express or parcel post F. O. B., Ithaca, New York.

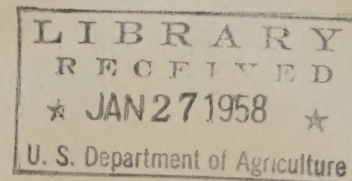

Trees are 2-3 years old and 18 to 24 inches in height.  
Filberts are 2-3 years and 18 to 24 inches in height.

Crath seedling trees - \$ 3.00 each  
Filbert seedlings - 1.50 each (plant two for  
pollination)

Terms - Cash with order or, if desired, orders will be booked for 10%--balance to be paid before the trees are shipped.  
Planting instructions accompany each shipment.

There is one limiting number of copies (approximately 1000) for each year.  
Without further delay, we are sending a new catalog for this year.

The trees we now have, are of the same original stock that we sold  
for the Roy, Paul C. Clark of Canada from 1937 to 1944 when the supply  
of seed was cut off by the Iron Curtain. Many of these seedlings  
have now come into bearing and have been under our close observation  
in control and we have been able to select the best. We have taken out  
graft and seed from the very best of these seedlings and have  
long, hard work and the size and quality of the stock. It is not surprising  
that these seedlings from selected stock come more nearly true  
from seed than in the case with most species.

While a considerable proportion of these trees are self-pollinating,  
better crops are assured if more than one tree is planted.

We have no way of knowing exactly the proportion of the seedling stock  
in our experience the younger trees stand up better and are  
likely to overtake and pass the larger ones of the same year. The  
year we transplanted are numbered with a lot of only eight.

We have a limited supply of seedlings.

There are three original types, selected for resistance to blight  
blight as well as hardiness, size and shape of leaves. The first is a  
result of many years of crossing and a final selection from more than a  
dozen trees.

Shipments made direct by express of parcel post E. O. B., Canada,  
New York.

There are 125 trees and 12 to 15 inches in height.  
Seedlings are 125 trees and 12 to 15 inches in height.

Each seedling tree - \$ 2.00 each  
Each seedling - 1.00 each  
Total two for  
\$ 3.00

Terms - Cash with order or, if desired, orders will be shipped  
for 10% advance to be paid before the trees are shipped.  
Shipping instructions accompany each shipment.
